

Sign up and Notify

Component Description:

My proposal is to create a sign up sheet for an account with Bad Books.

On the poc.html, I will inject the page poc.js which will have the page for a user to enter in a username and password.

I may rename this file later on in the assignment and will adjust my tutorial description then.

After clicking the submit button, two windows will pop up using the displaySocial.js and commentsForWebmaster.js.

The displaySocial.js page will have links two common social media sites like facebook and twitter, while the commentsForWebmaster.js will give the user an ability to leave a comment for the webmaster as well as providing contact information such as an email.

Currently, I have them all displaying on the page, but I will adjust the displaySocial.js and commentsForWebmaster.js to appear
